

A visual notebook where *sound, art and geometry* connect.

*wire music, video shaders, and 3d on one boundless page.
every element reacts together in real time.*

Connected by *Nature*

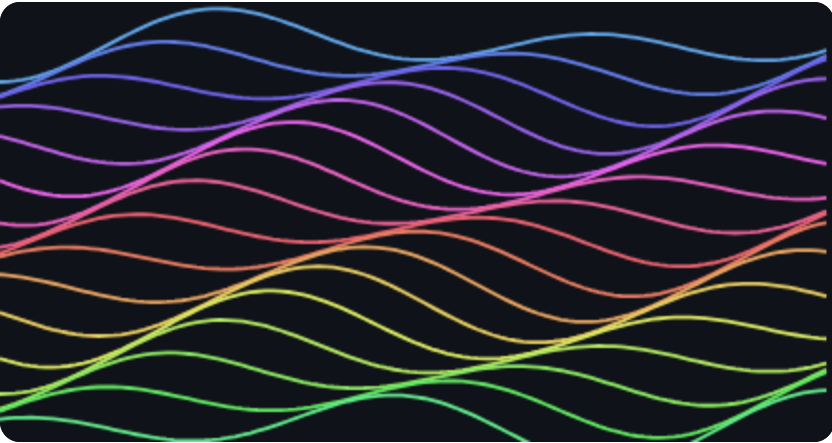

*an organic web of signals connecting math, physics, light and sound.
any node parameter can modulate any other in real time.*

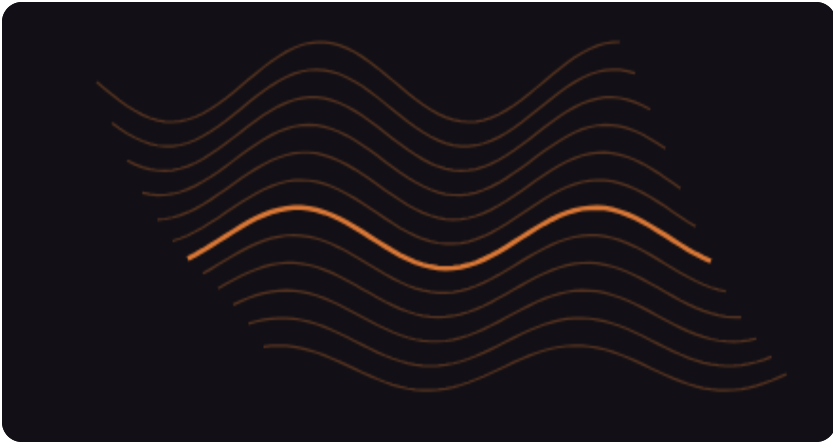

Creative Streams

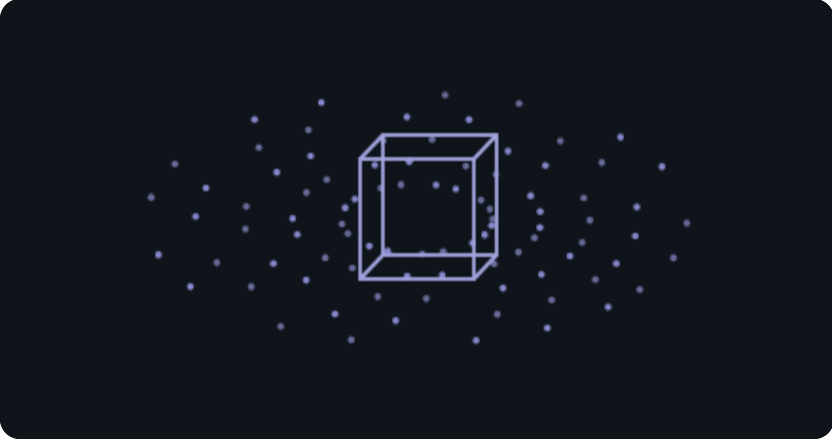

capabilities_live_stream

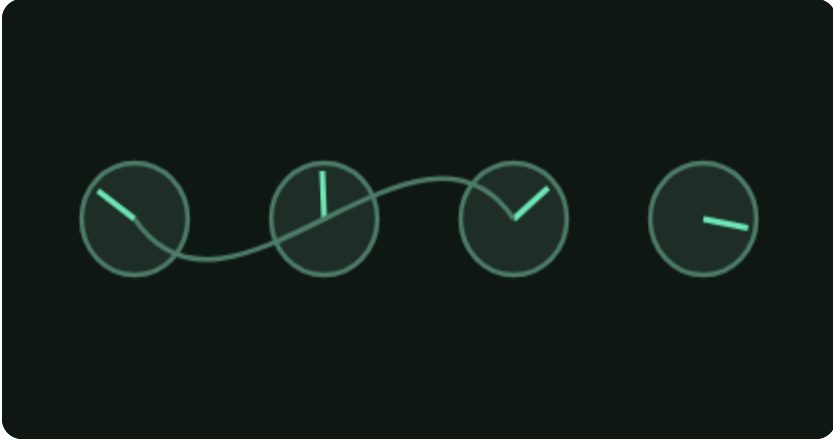

Real-Time Video & Shaders

Synthesizers & Sound Design

3D Geometry

Universal Modulation

*four powerful creative engines unified inside one modular canvas.
glsl shaders, modular synths, 3d geometry & universal modulation.*

Two *Recipes*

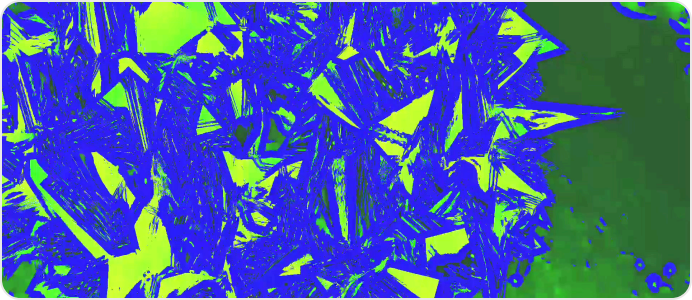

node_recipes_guide

RECIPE 01

Making Live Audio-Reactive Visuals

An **Audio Analyze** node splits sound into 8 frequency bands. Connecting a high-frequency band to a **Ripple Filter** causes live video to distort in exact sync with percussion.

Audio In → Audio Analyze → Ripple Filter → Visual Out

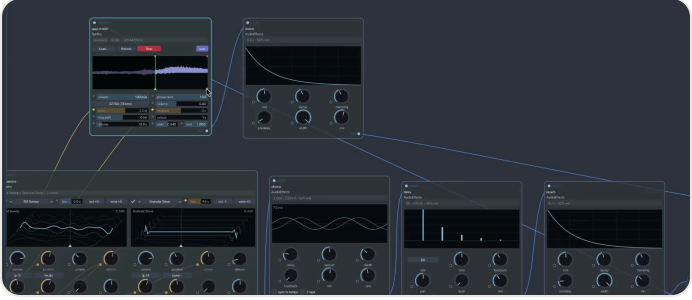

RECIPE 02

Turning Any Sound into Ambient Clouds

Drop any sound file into **PaulStretch** to stretch time up to 50x without changing pitch. Feeding the wash through an **Algorithmic Reverb** creates endless atmospheric textures.

Audio File → PaulStretch → Reverb & Delay → Audio Out

*connect blocks with cables to build reactive visuals in seconds.
stretch any sound 50x or distort live video to rhythm.*
